

CDAC MUMBAI

Concepts of Operating System

Assignment 2

Part A

What will the following commands do?

- 1. echo "Hello, World!"**
 - Prints "Hello, World!" to the terminal.
- 2. name="Productive"**
 - Assigns the string "Productive" to the variable name
- 3. touch file.txt**
 - Creates an empty file named file.txt if it doesn't exist or updates its timestamp if it already exists.
- 4. ls -a**
 - Lists all files and directories, including hidden files (those starting with .)
- 5. rm file.txt**
 - Deletes file.txt permanently.
- 6. cp file1.txt file2.txt**
 - Copies file1.txt to file2.txt. If file2.txt exists, it will be overwritten.
- 7. mv file.txt /path/to/directory/**
 - Moves file.txt to /path/to/directory/. It can also rename a file if the target path is a filename.
- 8. chmod 755 script.sh**
 - Changes the permissions of script.sh to rwxr-xr-x (owner: read, write, execute; group & others: read, execute).
- 9. grep "pattern" file.txt**
 - Searches for "pattern" in file.txt and prints matching lines.
- 10. kill PID**
 - Terminates the process with the given Process ID

11. mkdir mydir && cd mydir && touch file.txt && echo "Hello, World!" > file.txt && cat file.txt

- Creates a directory mydir navigates into it, creates file.txt, writes "Hello, World!" into it, and displays its content.

12. ls -l | grep ".txt"

- Lists files in long format and filters those containing .txt in their names.

13. cat file1.txt file2.txt | sort | uniq

- Concatenates file1.txt and file2.txt sorts the combined output, and removes duplicate lines.

14. ls -l | grep "^d"

- Lists directories (since directories start with d in ls -l output).

15. grep -r "pattern" /path/to/directory/

- Recursively searches for "pattern" in all files under /path/to/directory/.

16. cat file1.txt file2.txt | sort | uniq -d

- Combines file1.txt and file2.txt sorts them, and prints only duplicate lines.

17. chmod 644 file.txt

- Sets permissions of file.txt to rw-r--r-- (owner: read & write; group & others: read).

18. cp -r source_directory destination_directory

- Recursively copies source_directory and its contents to destination_directory.

19. find /path/to/search -name "*.txt"

- Finds all .txt files in /path/to/search and its subdirectories.

20. chmod u+x file.txt

- Gives the owner (u) execute (x) permission on file.txt.

21. echo \$PATH

- Displays the system's PATH variable, which lists directories where executable files are searched for.

Part B

Identify True or False:

1. **ls** is used to list files and directories in a directory.
 - True
2. **mv** is used to move files and directories.
 - True
3. **cd** is used to copy files and directories.
 - False
4. **pwd** stands for "print working directory" and displays the current directory.
 - True
5. **grep** is used to search for patterns in files.
 - True
6. **chmod 755 file.txt** gives read, write, and execute permissions to the owner, and read and execute permissions to group and others.
 - True
7. **mkdir -p directory1/directory2** creates nested directories, creating **directory2** inside **directory1** if **directory1** does not exist.
 - True
8. **rm -rf file.txt** deletes a file forcefully without confirmation.
 - False

Identify the Incorrect Commands:

- ☐ **chmodx** is used to change file permissions.
 - The correct command is **chmod**, not **chmodx**.
- ☐ **cpy** is used to copy files and directories
 - The correct command is **cp**, not **cpy**.

☐ **mkfile is used to create a new file.**

- There is no mkfile command in Linux.
- The correct way to create a file is touch filename or echo "" > filename.

☐ **catx is used to concatenate files.**

- The correct command is cat, not catx.

☐ **rn is used to rename files.**

- There is no rn command in Linux.
- The correct way to rename a file is mv oldname newname.

Part C

Question1: Write a shell script that prints "Hello, World!" to the terminal.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# echo "Hello, World!"  
Hello, World!  
root@DESKTOP-01EKEVA:~# |
```

Question 2: Declare a variable named "name" and assign the value "CDAC Mumbai" to it. Print the value of the variable. Question

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~#  
name="CDAC Mumbai"  
echo "The value of name is: $name"  
The value of name is: CDAC Mumbai  
root@DESKTOP-01EKEVA:~# |
```

Question 3: Write a shell script that takes a number as input from the user and prints it.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# echo "Enter a number:"  
read number  
echo "You entered: $number"  
Enter a number:  
25  
You entered: 25  
root@DESKTOP-01EKEVA:~# |
```

Question 4: Write a shell script that performs addition of two numbers (e.g., 5 and 3) and prints the result. Question

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# num1=5  
num2=3  
sum=$((num1 + num2))  
echo "The sum of $num1 and $num2 is: $sum"  
The sum of 5 and 3 is: 8  
root@DESKTOP-01EKEVA:~# |
```

Question 5: Write a shell script that takes a number as input and prints "Even" if it is even, otherwise prints "Odd". Question

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# echo "Enter a number:"  
read num  
  
if [ $((num % 2)) -eq 0 ]; then  
    echo "Even"  
else  
    echo "Odd"  
fi  
Enter a number:  
4  
Even  
root@DESKTOP-01EKEVA:~# echo "Enter a number:"  
read num  
  
if [ $((num % 2)) -eq 0 ]; then  
    echo "Even"  
else  
    echo "Odd"  
fi  
Enter a number:  
1  
Odd  
root@DESKTOP-01EKEVA:~#
```

Question 6: Write a shell script that uses a for loop to print numbers from 1 – 5

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# for i in {1..5}; do  
    echo $i  
done  
1  
2  
3  
4  
5  
root@DESKTOP-01EKEVA:~#
```

Question 7: Write a shell script that uses a while loop to print numbers from 1 to 5.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# i=1  
while [ $i -le 5 ]; do  
    echo $i  
    ((i++))  
done  
1  
2  
3  
4  
5  
root@DESKTOP-01EKEVA:~# |
```

Question 8: Write a shell script that checks if a file named "file.txt" exists in the current directory. If it does, print "File exists", otherwise, print "File does not exist".

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# if [ -e file.txt ]; then  
    echo "File exists"  
else  
    echo "File does not exist"  
fi  
File does not exist  
root@DESKTOP-01EKEVA:~# |
```

Question 9: Write a shell script that uses the if statement to check if a number is greater than 10 and prints a message accordingly.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# echo "Enter a number:"  
read num  
  
if [ $num -gt 10 ]; then  
    echo "The number is greater than 10."  
else  
    echo "The number is 10 or less."  
fi  
Enter a number:  
6  
The number is 10 or less.  
root@DESKTOP-01EKEVA:~# |
```

Question 10: Write a shell script that uses nested for loops to print a multiplication table for numbers from 1 to 5. The output should be formatted nicely, with each row representing a number and each column representing the multiplication result for that number.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# echo "Multiplication Table (1 to 5)"  
for i in {1..5}; do  
    for j in {1..5}; do  
        printf "%d x %d = %d\t" $i $j $((i * j))  
    done  
    echo "" # New line after each row  
done  
Multiplication Table (1 to 5)  
1 x 1 = 1      1 x 2 = 2      1 x 3 = 3      1 x 4 = 4      1 x 5 = 5  
2 x 1 = 2      2 x 2 = 4      2 x 3 = 6      2 x 4 = 8      2 x 5 = 10  
3 x 1 = 3      3 x 2 = 6      3 x 3 = 9      3 x 4 = 12     3 x 5 = 15  
4 x 1 = 4      4 x 2 = 8      4 x 3 = 12     4 x 4 = 16     4 x 5 = 20  
5 x 1 = 5      5 x 2 = 10     5 x 3 = 15     5 x 4 = 20     5 x 5 = 25  
root@DESKTOP-01EKEVA:~#
```

Question 11: Write a shell script that uses a while loop to read numbers from the user until the user enters a negative number. For each positive number entered, print its square. Use the break statement to exit the loop when a negative number is entered.

```
root@DESKTOP-01EKEVA: ~  
root@DESKTOP-01EKEVA:~# while true; do  
    echo "Enter a number (negative to quit):"  
    read num  
  
    if [ $num -lt 0 ]; then  
        echo "Negative number entered. Exiting."  
        break  
    fi  
  
    square=$((num * num))  
    echo "Square of $num is: $square"  
done  
Enter a number (negative to quit):  
4  
Square of 4 is: 16  
Enter a number (negative to quit):  
12  
Square of 12 is: 144  
Enter a number (negative to quit):  
-5  
Negative number entered. Exiting.  
root@DESKTOP-01EKEVA:~#
```

Part – E

1. Consider the following processes with arrival times and burst times:

Process	Arrival Time	Burst Time
P1	0	5
P2	1	3
P3	2	6

Calculate the average waiting time using First-Come, First-Served (FCFS) scheduling.

ANSWER-1 Given Data

$TAT \Rightarrow$
 $\hookrightarrow CT - AT$

Process	Arrival time	Burst Time	Completion Time (CT)	Turnaround Time (TAT)
P1	0	5	$0 \rightarrow 5 = 5$	$5 - 0 = 5$
P2	1	3	$5 \rightarrow 3 = 8$	$8 - 1 = 7$
P3	2	6	$8 \rightarrow 6 = 14$	$14 - 2 = 12$

Waiting Time (WT) \Rightarrow TAT - Burst time

P1	$5 - 5 = 0$
P2	$7 - 3 = 4$
P3	$12 - 6 = 6$

\Rightarrow Average Waiting Time (AWT)?

$$AWT = \frac{\sum WT}{\text{Total Processes}} = \frac{0+4+6}{3} = \frac{10}{3} = 3.33 \text{ units}$$

2. Consider the following processes with arrival times and burst times:

Process | Arrival Time | Burst Time |

P1	0	3
P2	1	5
P3	2	1
P4	3	4

Calculate the average turnaround time using Shortest Job First (SJF) scheduling.

ANSWER-2 Given Data

Process	AT	BT	Completion Time	TAT
P1	0	3	3	$3-0=3$
P2	1	5	4	$4-2=2$
P3	2	1	8	$8-3=5$
P4	3	4	13	$13-1=12$

P1 \rightarrow P1 arrives first at time 0 & executes at 3, CT=3

P2 \rightarrow At 3, ready queue P2(BT=5), P3(BT=1), P4(BT=4) [P3 has shortest]

P3 \rightarrow At 4, P2(BT=5), P4(BT=4) so P4 has shortest [CT(P3)=3+1=4]

P4 \rightarrow Finally P2 executes & that's only remaining time process. [CT(P4)=4+4=8]

CT(P2)=8+5=13

Average Turnaround Time(ATAT)

$$ATAT = \frac{\sum TAT}{\text{Total Process}} = \frac{3+2+5+12}{4} = \frac{22}{4} = 5.5 \text{ units}$$

3. Consider the following processes with arrival times, burst times, and priorities (lower number indicates higher priority):

Process	Arrival Time	Burst Time	Priority
P1	0	6	3
P2	1	4	1
P3	2	7	4
P4	3	2	2

Calculate the average waiting time using Priority Scheduling.

ANSWER-3 Given DATA

Process	A T	B T	Priority	CT	TAT	WT
P1	0	6	3	6	$6 - 0 = 6$	$6 - 6 = 0$
P2	1	4	1	10	$10 - 1 = 9$	$9 - 4 = 5$
P3	2	7	4	12	$12 - 3 = 9$	$9 - 2 = 7$
P4	3	2	2	19	$19 - 2 = 17$	$17 - 7 = 10$

Process executes based on priority

- Lower number = higher priority.

→ $P1 = 0 + 6 = 6$ CT(P1)

→ $P2 = P2$ has highest priority; $CT(P2) = 6 + 4 = 10$

→ $P3 = P4$ has highest priority (2); $CT(P4) = 10 + 2 = 12$

→ P3 executes as it's only left

• $CT(P3) = 12 + 7 = 19$

⇒ Average waiting Time

$$AWT = \frac{\sum WT}{\text{Total Process}}$$

$$= \frac{0 + 5 + 7 + 10}{4} = \frac{22}{4} = 5.5 \text{ units}$$

4. Consider the following processes with arrival times and burst times, and the time quantum for Round Robin scheduling is 2 units:

Process | Arrival Time | Burst Time |

P1	0	4
P2	1	5
P3	2	2
P4	3	3

Calculate the average turnaround time using Round Robin scheduling.

ANSWER-4

Process	AT	BT	CT	TAT
P1	0	4	10	$10 - 0 = 10$
P2	1	5	14	$14 - 1 = 13$
P3	2	2	6	$6 - 2 = 4$
P4	3	3	13	$13 - 3 = 10$

Grant Chart

0	P1	2	P2	4	P3	6	P4	8	P1	10	P2	12	P4	13	P2	14
---	----	---	----	---	----	---	----	---	----	----	----	----	----	----	----	----

- $t = 0$, P1 executes for 2 units (P1: 2/4)
- $t = 2$, P2 " (P2: 2/5)
- $t = 4$, P3 " (P3: 2/2)
- $t = 6$, P4 " (P4: 2/3)
- $t = 8$, P1 " (P1: 4/4)
- $t = 10$, P2 " (P2: 4/5)
- $t = 12$, P4 executes for 1 more units (P4: 3/3)
- $t = 13$, P2 executes for 1 more units (P2: 5/5)

⇒ Average Turnaround Time (ATAT)

$$ATAT = \frac{\sum TAT}{\text{Total Process}}$$

$$= \frac{10 + 13 + 4 + 10}{4} = \frac{37}{4} = 9.25 \text{ units.}$$
